

## Acterio FE Tasks

Posts API - <https://dummyjson.com/posts>

### Task:

1. Setup a new project using React.
2. Create a page accessible at the route '/posts'.
3. Fetch and display the posts on the page '/posts' using a grid layout.
4. Create a page accessible at the route '/posts/:id'.
5. Enable navigation to a post's dedicated page upon clicking on a post in the '/posts' page.
6. Present the detailed post in an appealing UI.
7. Assuming that user has not yet reacted to the post, add a react button, that will increase number of reactions.
8. Implement a search bar that allows you to filter posts.
9. If you still have time left, consider implementing a delete button to remove a selected post from the list.

### Notes:

- Utilize ALL data fields provided for a post at <https://dummyjson.com/posts> API.
- You may use any libraries / frameworks you like; however, MUI (Material-UI) is recommended.
- Bonus Points if you can identify and handle potential edge cases!

### Delivery:

- Upload the project to a public GitHub repository and share the link.
- Submit the task before the deadline specified in the email to which this task is attached.

Good luck!
